BIOLOG	`				
Q.PAPER	R-II (Objective Type) GROUP-I Maximum Marks: 17				
	PAPER CODE = 8463 LHR-G1-12				
Note: Four possible answers A, B, C and D to each question are given. The choice which you think is correct, fill that circle in front of that question with Marker or Pen ink in the answer-book. Cutting or filling					
two or more circles will result in zero mark in that question.					
1-1 Parthenocarpy is artificially induced by:					
	(A) Cytokinins (B) Auxin (C) Ethene (D) Abscisic acid				
2	Pairing of homologous chromosomes is called:				
	(A) Bivalent (B) Tetrad (C) Synapsis (D) Crossing over				
3	According to hypothesis, aerobic bacteria developed into mitochondria :				
(A) Symbiotic (B) Endosymbiont (C) Mutualistic (D) Bot					
4	What is our principle source of energy:				
	(A) Nuclear energy (B) Geothermal energy				
(C) Solar energy (D) Tidal energy					
5	Bats use for evaporative cooling:				
	(A) Saliva (B) Urine (C) Shivering (D) Both A and B				
6	pBR 322 would enable separating out colonies of bacteria in a medium containing:				
	(A) Tetracycline (B) Ampicillin (C) Gel (D) Both A and B				
7	Sarcoplasmic reticulum surround each				
	(A) Myofilament (B) Myofibril (C) Sarcomere (D) Both A and B				
8	The position of a gene on the chromosome is called its:				
	(A) Locus (B) Genotype (C) Phenotype (D) All of these				
9 Fresh water ecosystem covers less than:					
	(A) 10% (B) 05% (C) 02% (D) 01%				
10 The epiblast is presumptive:					
(A) Ectodern (B) Mesoderm (C) Endoderm (D) Both A					
11 The membrane that bounds vacuole is called: (A) Tonoplast (B) Symplast (C) Apoplast (D) All of the Company					
		(A) Euchromatin (B) Heterochromatin (C) Chromatin (D) Both A and I A plant has a growth pattern called :			
	(C) Primary growth (D) Secondary growth				
14	Autosomal non-disjunction may occur in other than:				
	(A) 20 th chromosome (B) 21 st chromosome				
	(C) 23 rd chromosome (D) None of these				
15 The normal speed of nerve impulse in human is per second:					
(A) 100 m/sec (B) 120 m/sec (C) 150 m/sec (D) None (D) During PCR thermostable enzyme is used named as:					
	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1				
17	(A) DNA polymerase (B) Taq polymerase (C) Both A and B (D) None of these The actual location of place where an organism lives is called:				
(A) Di di (B) Alli					
(A) Biosphere (B) Lithosphere (C) Atmosphere (D) Habitat					
	192-222-I-(Objective Type)- 7000 (8463)

		(Academic Sessions 2018 – 2020 to 2020 – 2022	2)		
DIOLOGI ZZZ (MIZZICIANI			Time Allowed: 2.40 hours		
PA	PER	- II (Essay Type) GROUP - I	Maximum Marks: 68		
		SECTION - I LMR-GI-	21		
2.	2. Write short answers to any ElGH1 (6) questions.				
(i) How animals of hypotonic environment osmoregulate? Give examples.					
	(ii)	Animals excrete nitrogenous wastes with digestive feces. Give	e example and significance		
of this adaptation.					
((iii)	How land animals trap a thick layer of air around the body?	Give its significance.		
((iv)	What is Ecdysis?			
		Differentiate Hinge Joint and Ball and Socket joint by giving e	xample.		
((vi)	What is arthritis?			
(vii)	Define seed dormancy. Give its significance			
(1	(iii)	Can we find a fruit without seeds? Give example.			
((ix)	What is eutrophication?			
	(x)	Differentiate between prairies and savanna.	<i>(4)</i>		
	(xi)	Define soil. Give its basic constituents.			
(xii)	What are industrial effluents? Give their two effects.			
3.		te short answers to any EIGHT (8) questions:	16		
	(i)	What happens when an impulse reaches a synaptic knob?			
	(ii)	Elaborate habituation as simplest form of learning.			
	(iii)	Give negative effects of nicotine.			
	(iv)	What is a sex limited trait?			
	(v)	State sexual dimorphism in drosophila.			
	(vi)	Define linkage group.			
(vii)	Tion Bene merup) nerbe emiter p			
(viii)	What are molecular scissors? How were they obtained?			
	(ix)	Write down the role of lambda phages as a vector.			
	(x)	Interpret the role of decomposers in recycling.			
	(xi)	Compare hydrosere with that of xerosere.			
((xii)	What is parasitism? Write down its importance.	W.		
4. Write short answers to any SIX (6) questions:					
	(i)	Compare gastrulation and organogenesis.			
	(ii)	How inhibitory effect and compensatory effect are caused?			
	(iii)	What is Karyotype? Give its application in species recognition	n.		
	(iv)	Give the composition of chromosomes.			
	(v)	Differentiate between heterochromatin and euchromatin.			
	(vi)	What is mitotic apparatus?			
((vii)	How cancer cells can be distinguished from normal cells?			
(viii)	What is modern synthesis or Neo-Darwinism?			
	(ix)	What are analogous organs? Give example.			
SECTION – II					
No	te:	Attempt any THREE questions.			
5.	(a)	Discuss the temperature classification of animals.	4		
713-13		Discuss nitrogen depletion and its remedies.	4		
6.		Compare sclerenchyma cells with collenchyma cells.	4		
٥.		What is transcription? How it is carried out in cell?	4		
7			pentration of secretions		
7. (a)		Explain the steps of that mechanism which maintains the cond in the body.	4		
	(h)		4		
0		Write a note on ozone depletion.			
8.		Describe the phenomena of fruit set and fruit ripening.	4		
Name of the least		Explain the process of crossing over with the help of diagram			
9.	-	Define and explain embryonic induction.	4		
	(b)	p+q=1	24		
		Argue that this balance shown in theorem may not vary for	4		
		a non-evolving population?	192-222-I-(Essay Type)-28000
